## Semantic Web/DL Practice Problems Solutions

---

### Problem 1

Consider the base concepts: **Person**, **Happy**, **Animal**, **Cat**, **Old**, **Fish** and the role **Owns(Person,Thing)**

Formulate ALC concepts for the following:

1. **happy person**.  $\text{Person} \sqcap \text{Happy}$
  2. **happy pet owner**.  $\text{Person} \sqcap \text{Happy} \sqcap \exists \text{ owns. Animal}$
  3. **person who owns only cats**.  $\text{Person} \sqcap \forall \text{ owns. Cat}$
  4. **unhappy pet owners who own an old cat**.  $\text{Person} \sqcap \neg \text{Happy} \sqcap \exists \text{ owns. (Animal} \sqcap \text{Cat} \sqcap \text{Old)}$
  5. **pet owners who only own cats and fish**.  $\text{Person} \sqcap \exists \text{ owns. Animal} \sqcap \forall \text{ owns. (Cat} \sqcup \text{Fish)}$
- 

### Problem 2

For each of the following axioms given below, determine which of the three interpretations ( $I_1$ ,  $I_2$ , and  $I_3$ ) in the subsequent table satisfy it. Assume A, B, C, and D are atomic concepts and P is a role.

1.  $B \sqsubseteq D$
2.  $A \sqsubseteq B \sqcap \forall P.C$
3.  $D \sqsubseteq B \sqcup \exists P.C$

Classes/Roles	$I_1$	$I_2$	$I_3$
$A^I$	$\{\}$	$\{a\}$	$\{b, c\}$
$B^I$	$\{a, b\}$	$\{a\}$	$\{b, c, d\}$
$C^I$	$\{b\}$	$\{b, d\}$	$\{a, b\}$
$D^I$	$\{\}$	$\{a, b\}$	$\{a, b, c, d\}$
$P^I$	$\{\}$	$\{(a,b), (a,c), (b,d)\}$	$\{(b,a), (b,b), (d,a)\}$

SOLUTION:

Formula	$I_1$	$I_2$	$I_3$
$B \sqsubseteq D$	No	Yes	Yes
$A \sqsubseteq B \sqcap \forall P.C$	Yes	No	Yes
$D \sqsubseteq B \sqcup \exists P.C$	Yes	Yes	No

### Problem 3

Show that the following KB is unsatisfiable.

#### TBox

$\text{MixedTeam} \equiv \text{Team} \sqcap \exists \text{ hasMember.Male} \sqcap \exists \text{ hasMember.Female}$

$\text{Male} \equiv \neg \text{Female}$

#### ABox

$\text{MixedTeam}(\text{fc})$

$(\forall \text{ hasMember.Male})(\text{fc})$

SOLUTION:

After pre-processing, we get the initial ABox as follows:

$A_0 = \{ (\text{Team} \sqcap \exists \text{ hasMember.} \neg \text{Female} \sqcap \exists \text{ hasMember.Female})(\text{fc}), (\forall \text{ hasMember.} \neg \text{Female})(\text{fc}) \}$

Using the  $\sqcap$ -rule, we can ADD the following to  $A_0$ :

$(\exists \text{ hasMember.Female})(\text{fc})$

Using  $\exists$ -rule on the added fact, we can ADD the following:

$\text{hasMember}(\text{fc}, a)$

$\text{Female}(a)$

Applying the  $\forall$ -rule on  $(\forall \text{ hasMember.} \neg \text{Female})(\text{fc})$  and  $\text{hasMember}(\text{fc}, a)$ , we can ADD:

$\neg \text{Female}(a)$

arriving at a CLASH.

Hence, the KB is unsatisfiable.

### Problem 4

Show that the following KB is unsatisfiable.

## TBox

Woman  $\equiv$  Person  $\sqcap$  Female

## ABox

Person(ann)

Female(ann)

$\neg$  Woman(ann)

SOLUTION:

After pre-processing, we get the following ABox:

$A_0 = \{ \text{Person(ann), Female(ann), } (\neg \text{Person} \sqcup \neg \text{Female})(\text{ann}) \}$

Applying the  $\sqcup$ -rule, we get:

$A_1 = \{ \text{Person(ann), Female(ann), } (\neg \text{Person(ann)} \sqcup \neg \text{Female(ann)}) \}$

Applying the  $\sqcup$ -rule, we get:

$A_{20} = \{ \text{Person(ann), Female(ann), } \neg \text{Person(ann)} \}$  containing a CLASH

$A_{21} = \{ \text{Person(ann), Female(ann), } \neg \text{Female(ann)} \}$  containing a CLASH

Hence the KB is unsatisfiable.
